

## PicoLite Release Notes

**Release Date:** 2 January, 2013

**Firmware Version:** 1.10

**Software Support:** Will work with DataSuite version 2.2.0.0 and higher only.

### ***Release Information***

- New Feature: The comments "Device was connected" and "Device was disconnected" are displayed in the DataSuite data table each time the device is connected to or disconnected from the computer. These comments are also saved to the device memory, so they will always be downloaded to the computer together with the rest of the recorded data.
- Bug Fix: If logger was running in °C and in alarm state, and is then configured in °F, the LED didn't flash red when the logger was in alarm status.
- Bug Fix: Random temperature readings spiked down to -31.5 °C after running a cycle of data.
- Bug Fix: Individual data readings were downloaded with future date at the end of a data set cycle.
